INTRODUCTION TO EIC

Why Invest in BB-Rated CLO Debt?

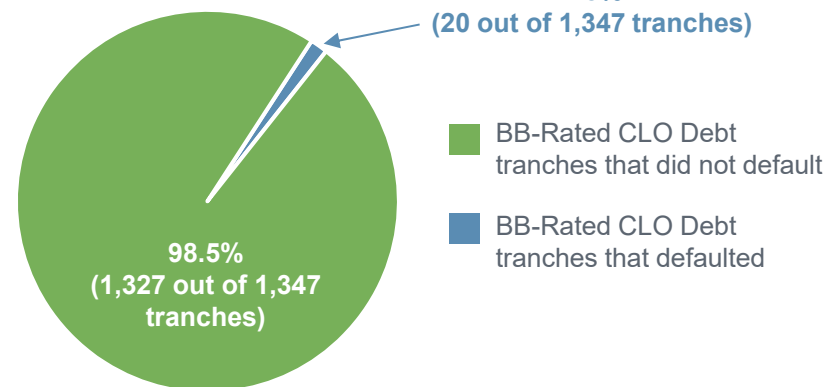

Key Attributes

- Potential for lower credit expense
- Potential for higher returns
- Expected protection against rising interest rates¹

Potential For Lower Credit Expense

From 1996 - 2Q 2018, the cumulative default rate on BB-Rated CLO Debt was 1.5% (or ~ 7 bps per annum)²

Potential For Higher Returns

The spread on BB-Rated CLO Debt is currently 381 to 398 bps in excess of that on senior secured loans and high yield bonds

1. Similar to the senior secured loans that serve as the underlying collateral for CLOs, BB-Rated CLO debt is a floating rate security that pays interest based on the 3-month LIBOR, plus a spread and, as a result, is expected to have lower interest rate risk than other fixed income securities in a rising interest rate environment. However, the Company's CLO investments are still subject to other forms of interest rate risk.
2. Standard & Poor's, Default, Transition, and Recovery: 2017 Annual Global Leveraged Loan CLO Default Study And Rating Transitions; Adviser's analysis of market data over applicable periods. The default rate on BB-Rated CLO Debt for the period from 1996 through 2Q 2018 is 1.5% (or just 0.07% per annum) as compared to 2.7% per annum for senior secured loans (from 1998 through 2Q 2018, the period for which the data is available) and 4.3% per annum for high-yield bonds (from 1996 through 2Q 2018).

CLO MARKET OVERVIEW

Loan Market Repayment Rate

Loan repayments provide capital for reinvestment within CLOs

CLO MARKET OVERVIEW

CLOs are Securitizations of a Portfolio of Senior Secured Loans

EIC focuses primarily in junior debt tranches of CLOs, with a focus on BB-Rated CLO Debt

Key Characteristics of CLO Structure

- No mark-to-market triggers (i.e., no forced selling)
- Match funded (i.e., limited refinancing risk on CLO debt)¹
- Ability to reinvest loan principal (i.e., not static)

The CLO structure highlighted on this page is a hypothetical structure, and the structure of CLOs in which the Company invests may vary from the example.

1. Since a CLO's indenture typically requires that the maturity dates of a CLO's assets (typically 5 to 8 years from the date of issuance of a senior secured loan) be shorter than the maturity date of the CLO's liabilities (typically 12 to 13 years), CLOs generally do not face refinancing risk on the CLO debt. However, CLO investors do face reinvestment risk with respect to a CLO's underlying portfolio. In addition, in most CLO transactions, CLO debt investors are subject to prepayment risk in that the holders of a majority of the equity tranche can direct a call or refinancing of a CLO, which would cause the CLO's outstanding CLO debt securities to be repaid at par.

CLO MARKET OVERVIEW

Key Forms of Credit Enhancement for CLO Debt Investors

CLO debt benefits from structural features and covenants that enhance its credit protection

■ Overcollateralization

- At a CLO's inception, the principal value of the loan collateral exceeds the principal amount of the CLO debt outstanding (i.e., the CLO debt is "overcollateralized" by excess loan collateral)

■ Excess Spread

- Since the spread on a CLO's loan collateral exceeds the spread on the CLO debt, this excess spread serves as a source of credit enhancement for CLO debt investors

■ Non-Static Structure

- The structure of CLOs enables the CLO collateral manager to take advantage of periods of market stress and loan price volatility by re-investing principal proceeds from loan repayments and sales into loans potentially at lower prices and wider spreads

In the Adviser's opinion, these "self-correcting" structural features of CLOs offer a margin of safety for CLO debt investors and have contributed to the low historical default rate on CLO debt¹
